SKILLS

Languages: C, C++, Go, JavaScript, TypeScript, Python

Frameworks & Tools: React.js, Node.js, Express

Databases: PostgreSQL, MongoDB

Developer Tools: Git, GitHub, VS Code, Google Cloud Platform

Core Expertise: DSA, Competitive Programming, Full Stack Development

AI Tools: Google AI Studio (Gemini), Groq API

PROJECTS

OpenGuido – VS Code Productivity Extension | TypeScript, VS Code API | [openguido](#), [github](#)

- Built a VS Code extension providing instant access to code snippets and custom commands for competitive programming
- Reduced repetitive typing by ~40% during contests through customizable snippet management
- Implemented command execution and template insertion directly within editor workflow
- Integrated Llama model (via Groq API) for AI-powered snippet generation with offline + online search support

Mintok – AI Token Minimizer & Optimization SDK (SaaS) | TypeScript, Python | [mintok](#), [github](#)

- Built an AI-powered token optimization system that reduces LLM token usage by up to 30%, significantly lowering inference costs
- Implemented multi-stage token optimization pipeline for efficient processing of long-form AI content
- Features: token budget optimization, smart token pruning, and a cost-efficient AI inference pipeline
- Designed as a production-ready solution for reducing AI API costs while maintaining output quality

H4chat – Temporary Secure Communication Platform | Go, WebSockets, React | [h4chat](#), [github](#)

- Built a real-time, privacy-first messaging platform with no account creation or permanent storage
- Implemented a concurrent WebSocket server in Go supporting multiple users with low-latency messaging
- Password-protected rooms + self-destructing chats using in-memory session stores (no database persistence)

ACHIEVEMENTS

Google Student Campus Ambassador — Led student engagement initiatives, organized Google program awareness campaigns across campus.

Codeforces – Solved 100+ competitive programming problems | [codeforces](#)

Leetcode – Solved 100+ DSA problems | [leetcode](#)

EDUCATION

Rajiv Gandhi Proudlyogiki Vishwavidyalaya (RGPV)

Aug 2024 – Jun 2028 (Expected)

B.Tech in Computer Science and Engineering

Relevant Coursework: Object-Oriented Programming, Operating Systems, Databases, Data Structures and Algorithms, Computer Organization
